To Scaw Suppliers

The Scaw group of companies uses an integrated ERP system for processing purchase orders. Scaw has employed the services of M2North for the electronic distribution and control of purchase order documents created in the ERP system.

The M2North system provides certain advantages to both buyer and seller including:

- an order confirmation facility
- various status reports
- the elimination of "lost" orders
- reduced faxing of documents
- the elimination of illegible documents

Scaw encourages you to join the list of our suppliers that are already using this system.

Please contact the undersigned in the event of any queries.

Yours faithfully

Dave Gorrie
Materials Manager
